

VACUUM DISC MATE IQ1300A

Vacuum-Style Stabilizer

Warpage and Strain of a record are resolved!

How to Operate

Vacuum style stabilizer will adsorb warpage and strain of a record to the pure magnesium disc, which will improve unwanted resonance and low resolution, and play the best sound quality.

Remove the turntable mat and set the magnesium disc.

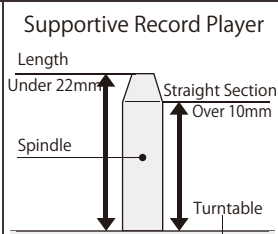

Turn on the suction box switch, and it will complete suction in 20 mins.

(If a record has a large warpage)
Put the suction adaptor on the turntable and perform the suction operation.

When adsorbed, remove the suction collar. It is ready to play a record.
